

Butler Trombones makes small bore carbon fiber horns as well as custom carbon fiber outer slides for larger horns.

The Butler Lemondrop is modeled after Frank Rosolino's Conn 6h and is a .500 bore instrument.

The JJ, a tribute to the great JJ Johnson, is a .508 bore horn for those that prefer a little darker and bigger horn.

We make custom CF slides for .500, .508, .547, and .562 bore instruments.

An ultra-lightweight carbon fiber slide can give you much more speed and accuracy in your fast playing. It also means way less stress and more focus on the music and less on your instrument. As a point of reference these slides weigh 85 grams. A PBone slide weighs in at 132 grams and a standard Conn 6h outer slide weighs a whopping 242 grams.
